GENERAL INSTRUCTIONS

1. Not for residential use.
2. These fixtures must only be serviced by a qualified technician.
3. In addition to the instructions indicated on this page, relevant health and safety requirements of the appropriate EU Directives must be adhered to at all times.
4. This fixture is in compliance with section 17 - Lighting appliance for theatre stages, television, cinema and photograph studios.
   Standards NF EN 60598-1, NF EN 60598-2-17, Low Voltage Directive 2014/35/UE & EMC Directive 2014/30/UE.
5. This fixture is rated as IP20, and is for indoor use only.

FIXTURE

6. Ensure fixture is correctly mounted on an appropriate support.
7. Protection screens and lenses must be replaced in the event of any damage, such as cracks or deep scratches, since these might reduce performance.
8. When hung or flown the fixture must be secured by an additional hanging accessory (such as a safety cable or bond) of suitable length.
9. Safety bonds or cables must be securely attached to the back of the fixture and be as short as possible, or rolled up as necessary, to minimise travel distance should the fixture be dislodged.
10. Movable accessories (scroller, etc.) must also be secured with a suitable safety cable or bond at the front of the fixture.
11. The combined weight of both the fixture and the accessories must be considered when choosing the load-bearing capability of safety cable or bond.
12. Do not open lighting fixture when the source is on.
13. WARNING: LED source becomes hot during use. Allow fixture to cool before servicing.
14. Do not tamper with design of fixture nor any of its safety features.
15. Tighten electrical mains cable connections regularly and replace with one of identical specification if damaged.
16. Use only with correct power supply.

VENTILATION

17. Keep well away from flammable material.
18. Not for outdoor use. Do not cover. Do not permit fixture to get wet.
19. To avoid overheating, do not obstruct air vents.
20. Ensure any cooling fans are in correct working order. If fans are not working, turn fixture off immediately and service as necessary.

CLEANING

21. Do not touch the LED source with your fingers.
22. To clean the optical parts, use a soft cloth in combination with distilled water or isopropyl alcohol recommended for coated optics. Do not use any cleaning product that contains solvents or abrasives, as these can cause surface damage. Dry with a soft lint-free cloth.
23. Regularly remove dust with a soft lint-free cloth.
24. If the fixture has filters, they must be cleaned frequently.

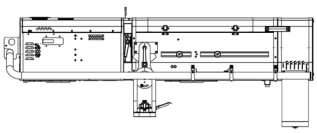
POWER SUPPLY

25. Disconnect from the mains before servicing.
26. Mains connection only. Do not connect to "electronic output" such as dimmer.
27. Ensure power supply circuit breakers, always remain accessible.

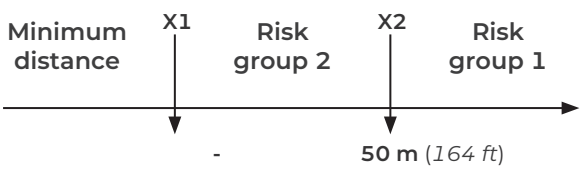
PLEASE NOTE

This product has been built to conform to European standards relating to professional lighting equipment.
Any modification made to our products will void the manufacturers' warranty.

Risk group 2
CAUTION: Possibly hazardous optical radiation emitted from this product. Do not stare at operating lamp. Maybe harmful to the eye.



Photobiological safety according to EN62471



Risk group 2. Luminaires should be positioned so that prolonged staring into luminaire at a distance closer than 50 m is not expected.

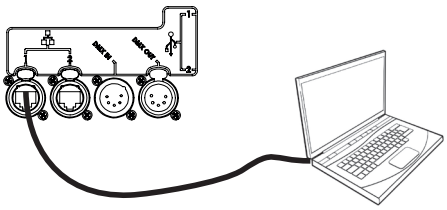
5.2 DMX512 - A remote control

5.2.1 Protocol

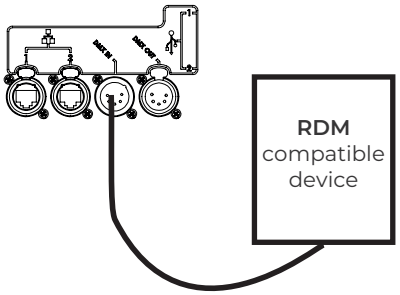
E1.11 – 2008, USITT DMX512-A

5.2.2 Configuration

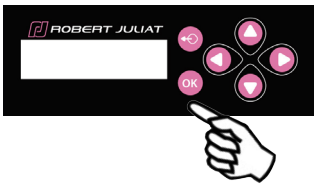
Set mode through web interface
(*see 5.4.4 Web interface*)



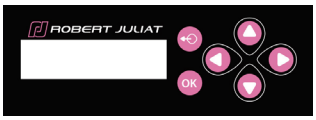
Set mode through RDM protocol

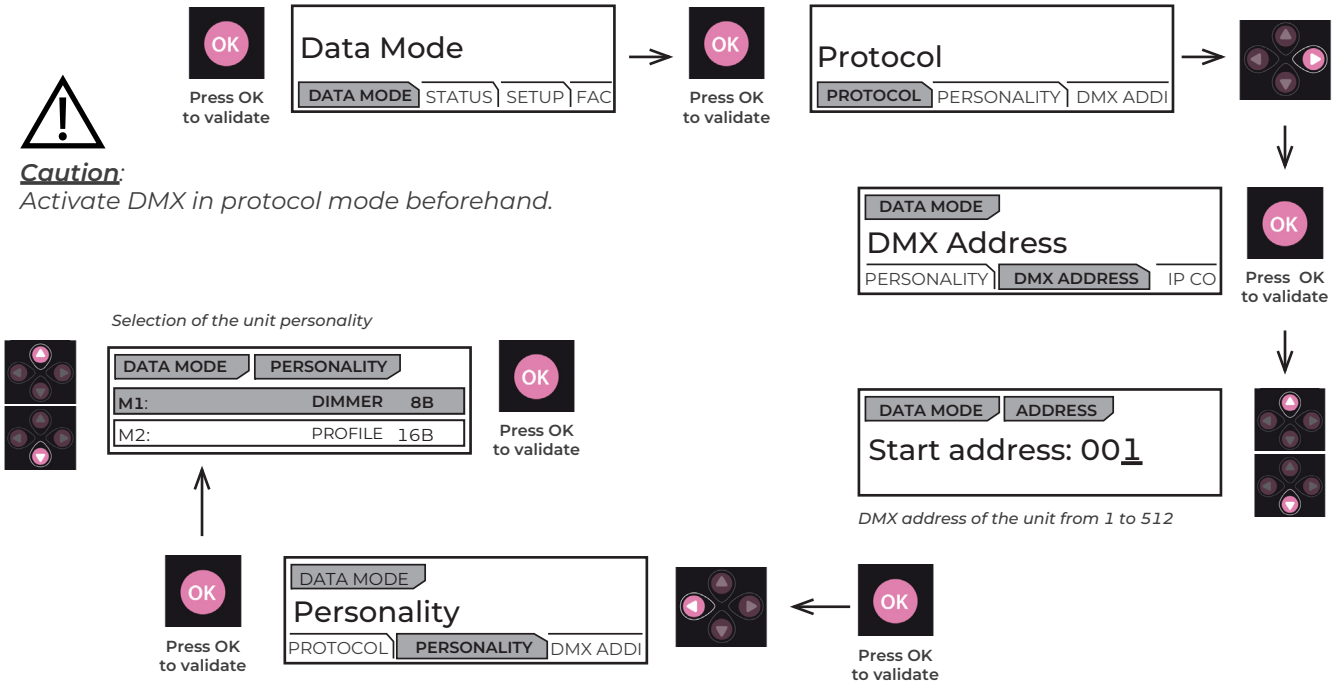


Local control



1 - Set DMX address
2 - Set personality mode (*see 5.2.4. DMX chart*)



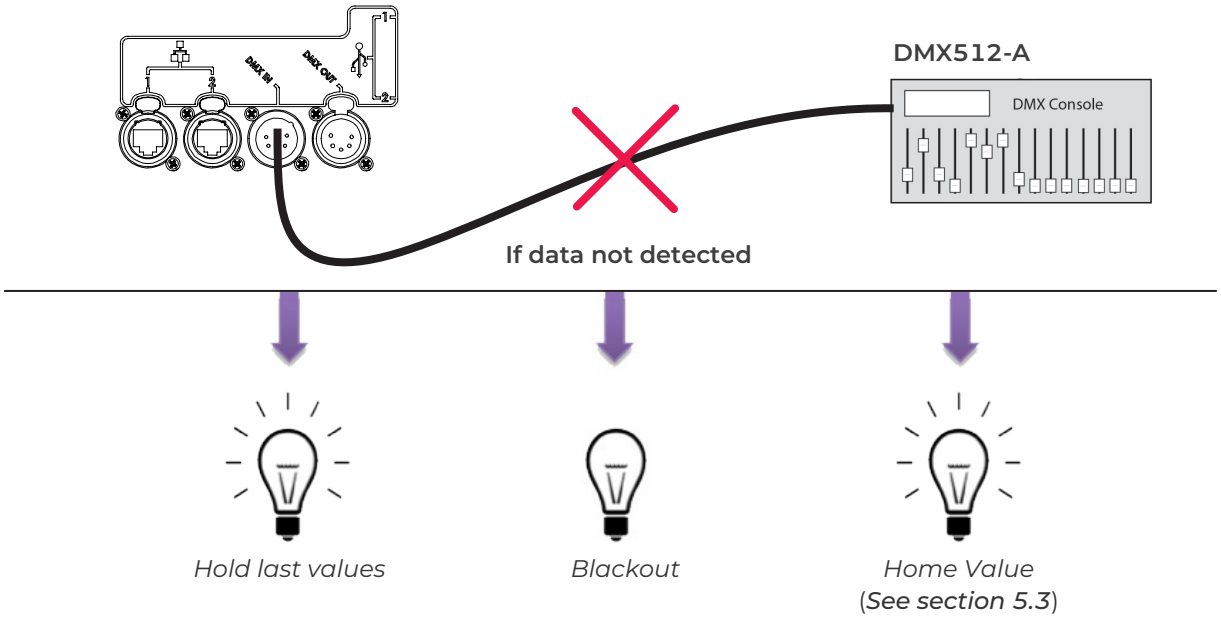


Caution:
Activate DMX in protocol mode beforehand.

5.2.3 Parameters

5.2.3.1 DMX Hold

➡ Selection in **SETUP / Data Setup / DMX HOLD** menu



5.2.3.2 FIxture ID

➡ Selection in **SETUP / DATA SETUP / FIXTURE ID** menu

Fixture ID can be set through **web interface** or **RDM** protocol or **local control**

Each unit can be identified by a Fixture ID number
– Once defined, the Fixture ID is displayed on the Home screen.

Example: Installation with 6 units						Home screen information	ID1 @ 101	ID2 @ 123	ID3 @ 145	ID4 @ 167	ID5 @ 189	ID6 @ 211
FIxture ID	1	2	3	4	5	6
DMX address	101	123	145	167	189	211

5.2.3.3 Terminator

Mode: Auto
A resistor of 120R is automatically connected to terminate the DMX line as the RS485 standard specifies.

5.2.3.4 Node

On sACN/ArtNet/Dual mode we have the possibility to transmit a DMX/RDM signal protocol on the DMX port (Output). The selection can be done through the menu/Webpage/RDM.

On Dual mode (sACN/ArtRdm) the node feature is automatically selected.

5.3 Home values

"Home values" represent a selection of values manually entered into the device via the keypad to produce a defined state.
These Home values can be set in the following modes:

Parameters / control modes	Dimmer8B Mode 1	Dimmer16B Mode 2	Profile8B Mode 3	Profile16B Mode 4	Followspot8B Mode 5	Followspot16B Mode 6	Standalone*
Dimmer	DMX	DMX	DMX	DMX	DMX	DMX	HOME VALUE
Response time	HOME VALUE	DMX	DMX	DMX	DMX	DMX	HOME VALUE
Dimmer Master	HOME VALUE	HOME VALUE	DMX	DMX	DMX	DMX	HOME VALUE

If the function is not controlled by DMX, the Home value is automatically activated.

HTP mode between DMX, local and HOME VALUES

(*) Defines a standalone operating mode in the following cases:

- As default values when used without data — Data mode ➡ Protocol ➡ Standalone
- As reference values following a data signal loss. — Set up ➡ Data set up ➡ DMX hold ➡ Standalone

5.4 Network

Our network stack can handle several flows of protocol at the same time.

Protocol always available:
- Web page to set up parameters - *See section 5.4.4*
- LLRP (Low Level Recovery Protocol) for IP network configuration - *See section 5.4.5*

A selection of Protocols dedicated to lighting:
- Art-Net V4 - *See section 5.4.1*
- sACN - *See section 5.4.2*
- Dual: Sacn + Art-RDM (DMX512 data signal + RDM) - *See section 5.4.3*

From July 2024 the Robert Juliat equipment based on RJ LED2 platform is configured as follows:
- DHCP (**Dynamic Host Configuration Protocol - RFC1531**) ON
  ➡ https://www.rfc-editor.org/rfc/rfc1531
- Zeroconf (**Zero-configuration networking – IPv4LL/APIPA – RFC3927**) ON
  ➡ https://www.rfc-editor.org/rfc/rfc3927

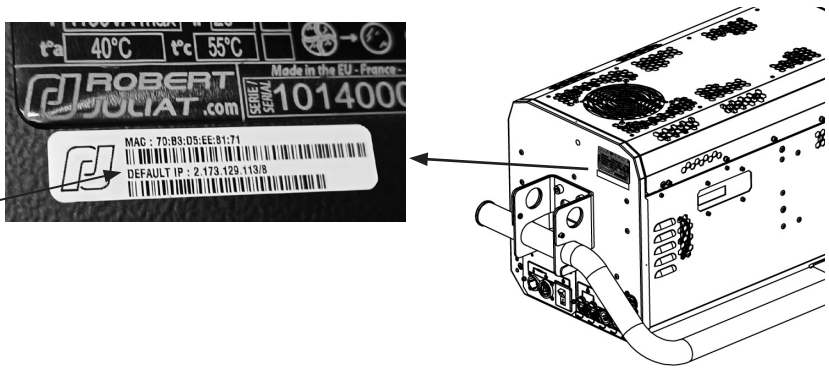
IP Addressing of Parameters - *See section 5.1.2*
Default:
- At startup, the device's IP address is set to 000.000.000.000 with a subnet mask of 000.000.000.000
- After connecting to the network, the device awaits the assignment of an IP address and subnet mask by the DHCP server.
- If there is no DHCP server, a unique IP address and subnet mask are automatically assigned.
  IP : 169.254.XXX.XXX **Mask :** 255.255.0.0

Most personal computers are configured with DHCP and Zeroconf enabled, so the IP address defaults to 169.254.X.X with a subnet mask of 255.255.0.0.
When connected to a Robert Juliat device, since the IP address/mask range are in the same class, network communication works seamlessly.
This configuration was chosen to make it easier for non-IT technicians.

Static IP;
It's possible to configure a static IP address, but be sure to select a unique IP address with the correct subnet mask.
Configuration can be done via the Web Page, RDM, LLRP, Art-Net, or locally.

Default IP Address:
When DHCP mode is OFF and no static IP address has been selected, the device will default to a Class A IP address of 2.XXX.XXX.XXX with a subnet mask of 255.0.0.0.
This address can be found on a label near the ID plate or by pressing the right arrow on the local control.

Default Settings:
DHCP = OFF
Address = 2.XXX.XXX.XXX
Mask = 255.0.0.0



Changing the Controlling Computer's IP Address:
- The IP address and subnet mask of both the fixture and the computer must be on the same network class.
- The computer's IP address must be different.
- Refer to your operating system's support to modify IPv4 settings:
  Change your IP address on Windows
  ➡ https://support.microsoft.com/en-us/windows/change-tcp-ip-settings-bd0a07af-15f5-cd6a-363f-ca2b6f391ace
  Change your IP address on Mac
  ➡ https://support.apple.com/en-ae/guide/mac-help/mh14129/mac

Example: Using the fixture's default IP address
1 - Computer IP address: 2.2.2.2
2 - Computer subnet mask: 255.0.0.0

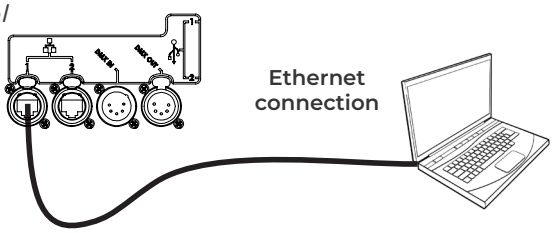
5.4.4.1 Control



The fixture must be connected to a compatible network or directly linked to a computer with an RJ45 Ethernet cable.

The fixture's IP address: ***see section 5.4. Network***

5.4.4.2 Connection to the Web interface

1 - Open a web browser (Microsoft Edge, Firefox, Apple Safari...)

2 - Enter the fixture's IP address in the browser's address bar

⚠
- "00X" is read as "X".
- Never type a zero (0) before the numbers XX or X (***see 5.4.4***)

3 - The HOME page will appear, and all settings can now be viewed and modified.

5.4.5 LLRP (Low-Level Reader Protocol)

LLRP is a multicast protocol that facilitates basic IP configuration. It is part of the ESTA E1.33 RDMnet standard.
LLRP can be used for the initial configuration of networked equipment. It provides a low-level mechanism for discovering and configuring the network parameters of devices, including IP settings and basic RDMnet configuration settings.

LLRP Targets expose these parameters for configuration and respond to discovery requests from LLRP Managers. Once an LLRP Manager discovers one or more LLRP Targets, it can use LLRP to send RDM commands to retrieve or modify these parameters.

A SOLUTION FOR INCORRECT OR UNKNOWN IP CONFIGURATION

Network connectivity issues are often caused by misconfigured network addresses, with improperly configured subnet masks being the most common problem.
LLRP uses two multicast IP addresses, enabling communication even when all other network communication has failed.
Since multicast addresses are unaffected by a misconfigured subnet mask, LLRP provides an efficient and reliable solution to recover from network misconfiguration.

In summary, LLRP simplifies the process of identifying and configuring the IP addressing of LLRP-compatible devices on your network.

All Robert Juliat equipment based on the RJ LED2 platform includes LLRP functionality.

Two LLRP Manager software tools are available for free:

6.1 Preventive maintenance

6.1.1 Frequency

General maintenance should be performed at least once a year or more frequently if the equipment is operated in adverse conditions (smoke, heat, humidity, touring, etc.).

6.1.2 General cleaning

Remove dust from the unit.
Front glasses can be cleaned with solutions containing alcohol.

6.1.3 General visual check

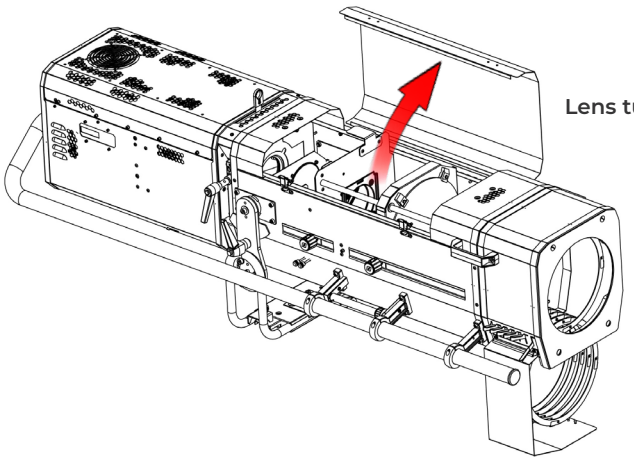
- No trace of heat.
- No loose contacts.
- No missing parts.
- Tighten mechanical assemblies (screws, bolts and nuts, etc.).

6.1.4 LED source

- Do not touch the surface of the LED source (no contact with your hands or any tools).
- Do not put compressed air directly on the source.
- Contact a certified RJ distributor in case of residuals or other objects located on the surface of the LED source.

6.1.5 Optics

Only use solutions containing alcohol to clean optical parts (lenses).
- To clean the optical parts, use a soft cloth in combination with distilled water or isopropyl alcohol recommended for coated optics. Do not use any cleaning product that contains solvents or abrasives, as these can cause surface damage.
- Dry with a soft lint-free cloth.



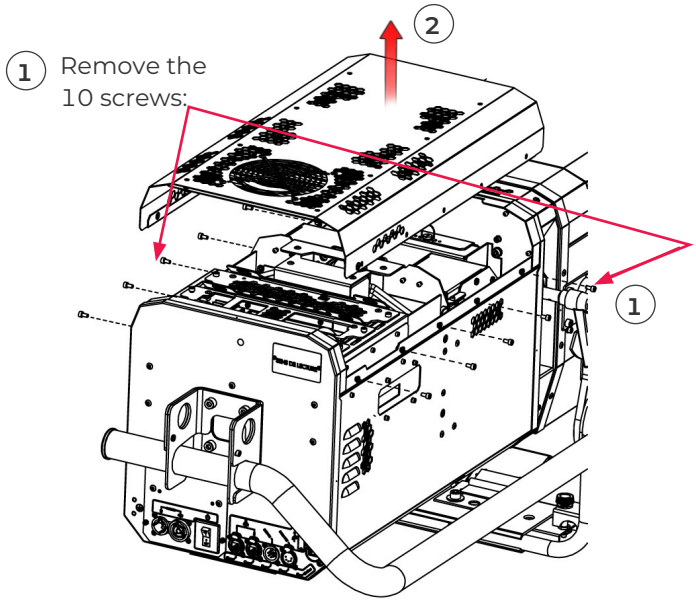
Lens tube access

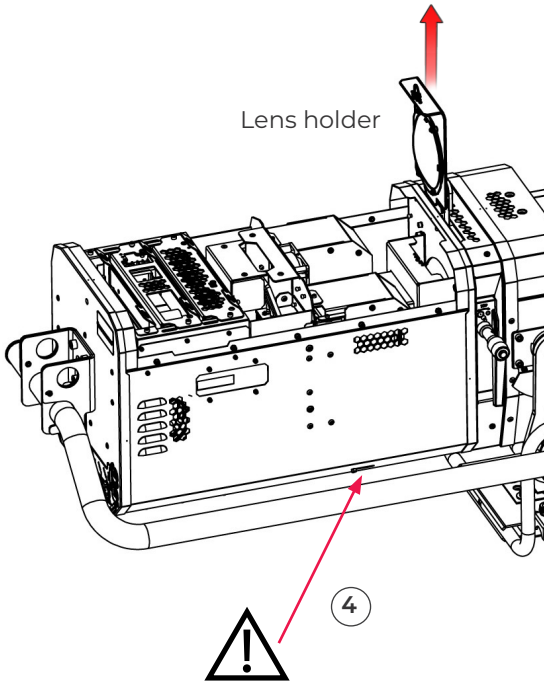
6.1.6 LED house cleaning

Inner parts & lens holder access.

- To clean the optical parts, use a soft cloth in combination with distilled water or isopropyl alcohol recommended for coated optics. Do not use any cleaning product that contains solvents or abrasives, as these can cause surface damage.
- Dry with a soft lint-free cloth.

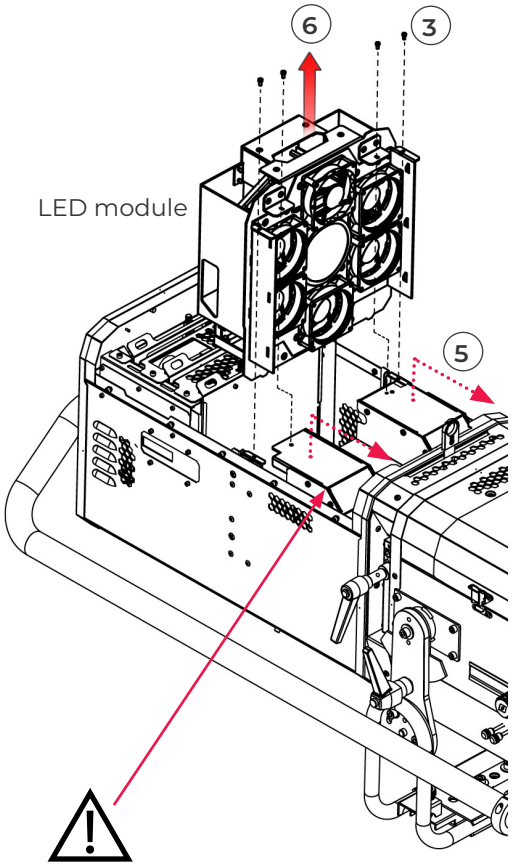
Removing the LED housing cover: 1 ➡ 2





Release the screw on each side.

Removing the LED module: 3 ➡ 4 ➡ 5 ➡ 6



After removing the 4 screws (step #3) and releasing the 2 screws (step #4), push forward the LED protection unit (step #5). Now you can remove the LED module (step #6).

LED module set-up procedure:

6.2 Analysis

In case of problem, contact RJ distributor with the following information:

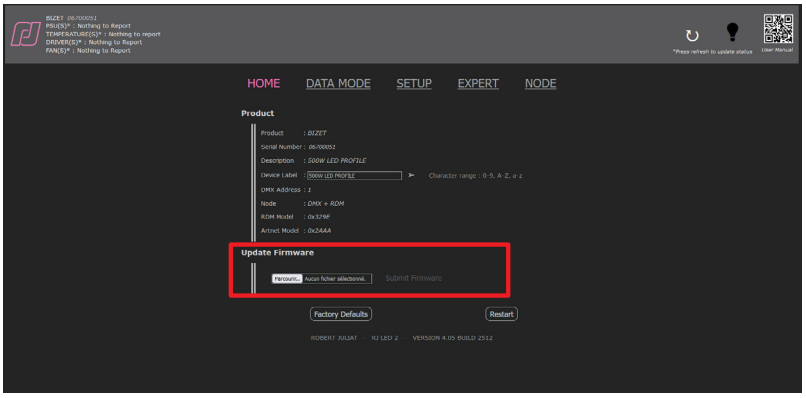
- Model, version and serial number of the product.
- From the menu status:
  - Software version
  - LED board IDs
  - Device hours
  - Picture of the Selftest Report (*See section 6.6 Selftest*)
- Description of the problem.

6.3 Electronic thermal management system

In case of overheating, light intensity will be reduced by the system.
“Power reduction X%” will be shown on the display with the reducing percentage.

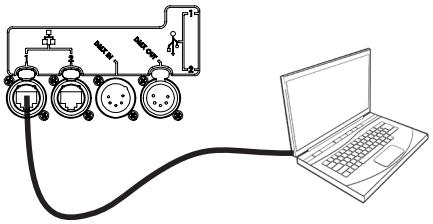
6.4 Firmware update

1. **Download the firmware** from one of the following links :
   - www.robertjuliat.com/LED/**PDF_PAGE or scan the QR code:**
   - www.robertjuliat.com/followspots/**Arthur**
   - www.robertjuliat.com/followspots/**ArthurLT**
2. **Unzip** the file. There are 4 files:
   - **Firmware** (.upd2 format)
   - **Firmware history**
   - **Update procedure**
   - **User manual** from firmware version **V5.0x** onwards
3. **Switch on** the lighting fixture.
4. **Connect the fixture to the network** using an **RJ45 Ethernet cable** from your computer.
   You can either connect it to your lighting network (**RJ45**) or directly to your computer (**RJ45**).
5. Open a Web browser (Microsoft Edge, Firefox, Apple Safari, etc.).
6. Enter the fixture’s IP address in the browser’s address bar
   - “00X” is read as "**X**".
   - **Never type a zero** (0) before the numbers XX or X (***see section 5.4***).
7. Upload your firmware file (.upd2).
   In the “**Update firmware**” window, select the update file and then click on “**Submit firmware**”.

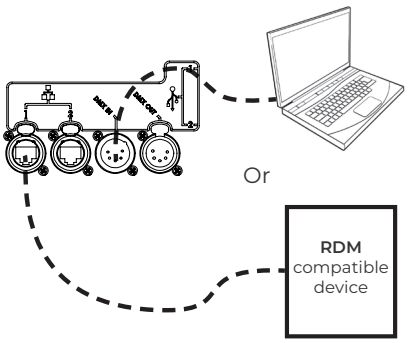


6.5 Factory defaults

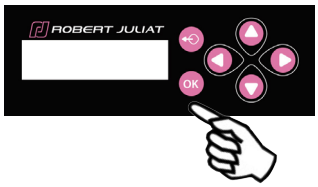
Set to factory defaults / reset through web interface (Home page)



Set to factory defaults / reset through RDM protocol



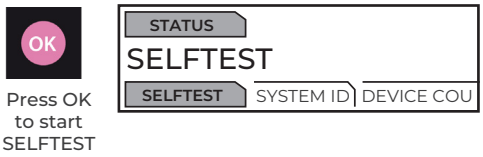
Set to factory defaults / reset through local control



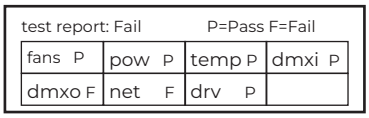
Select **FACTORY DEFAULT** in the main menu to reset all values and parametres

6.6 Selftest

Select **SELFTEST** in the STATUS menu :



At the end of each test, a **PASS/FAIL** message will be displayed.
If the DMX and network functions need to be tested, the system will prompt you to perform certain operations.



Test Report
An “F” (FAIL) or “P” (PASS) will be displayed at the end of the self-test (SELFTEST).

If the problem persists, please take a photo of the test result and send it either to your Robert Juliat dealer or to the Robert Juliat After-Sales Service, if requested
(email: service@robertjuliat.fr)
